ABSTRACT:

According to a broad aspect of a preferred embodiment of the invention, a Customer
Interface Process is provided. First, a service level agreement is received for a
hybrid network customer. Next, the service level agreement is stored after which
inquiries are received from network customers reflecting occurrences related to the
hybrid network. Thereafter, events are generated based on the customer inquiries
and the service level agreement.

ABSTRACT:

Telephone calls, data and other multimedia information including video, audio and data is routed through a switched network which includes transfer of information across the internet. Users can transmit video, audio and data communications of designated quality over the internet to other registered video telephony users. Users can manage more aspects of a network than previously possible, and control network activities from a central site.
